Specification

✓ 1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

2. The disclosure is objected to because of the following informalities: The continuation
✓ data in the first paragraph of the specification requires updating (i.e., patent numbers for the application serial numbers).

Appropriate correction is required.

3. The abstract of the disclosure is objected to because it does not provide a concise
✓ statement of the technical disclosure which is new in the art to which the invention pertains. In addition, the abstract should not begin with "The present invention". Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

5. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Wang et al. (U.S. Pat. 5,855,583).

Art Unit: 3739

Wang et al. disclose providing a plurality of surgical instrument assemblies, connecting them to a manipulator, disconnecting them from the manipulator and replacing them with another instrument assembly (col.12, lines 30-38). The surgical instrument assemblies each comprise a wrist unit having a shaft (82) with a proximal end (96) and an instrument coupled to the distal wrist (90,91, Fig.7). The instrument (90,91) is pivoted about the distal wrist by rod (92). Also note Figures 13 and 14 for an alternative pivoting tool member. The instruments are introduced to a treatment site with the manipulator arm (Fig.1, col.5, lines 46-48). A drape (125) shields the manipulator arm while an adaptor (45) attaches the proximal end of the wrist unit shaft to the manipulator arm through the drape (125).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Jensen (U.S. Pat. 5,931,832)--note surgical manipulator with detachable surgical instrument assembly.
